## MUMPS UPDATE

3rd August 2017

Mumps has arrived in Northland. We had our first locally-acquired cases this week. More are likely. As you will probably be aware, Auckland is currently experiencing several notifications of mumps per day. Mumps is also present in some Pacific Islands, especially Fiji and Tonga. Most cases in Auckland are in the 10-30 year age-group; the situation is likely to be similar here.

Mumps typically presents with fever and parotid swelling (swelling around lower jaw and upper neck). Two doses of MMR vaccine are 85% effective, so cases can still occur in fully immunised people. Those with mumps are most infectious from 2 days before the onset of swelling until 5 days after.

MMR vaccine is free to anyone who needs it. If you or your child has not had two doses of mumps containing vaccine (MMR), or you are not sure, please contact your doctor for further information and catch up dose(s) if necessary. The vaccine is not given in pregnancy or in women who may become pregnant in the next four weeks.

For more information please contact your school's Public Health Nurse.
